Analysis of Geotechnical Problems with Abaqus

Day 1

- Lecture 1  Introduction
- Lecture 2  Physical Testing
- Lecture 3  Constitutive Models: Part 1
- Lecture 4  Constitutive Models: Part 2

- Workshop 1  Material Models for Geotechnical Applications
Day 2

- Lecture 5  Analysis of Porous Media
  - Workshop 2  Pore Fluid Flow Analysis: Consolidation

- Lecture 6  Modeling Aspects
  - Workshop 3  Pore Fluid Flow Analysis: Wicking

Additional Material

- Appendix 1  Stress Equilibrium and Fluid Continuity Equations
- Appendix 2  Bibliography of Geotechnical Example Problems
- Appendix 3  Additional Example Problems

Overview

• Introduction
• Overview of Geotechnical Applications
• Classical and Modern Design Approaches
• Some Cases for Numerical (FE) Analysis
• Experimental Testing and Numerical Analysis
• Requirements for Realistic Constitutive Theories
Overview

- Physical Testing
- Basic Experimental Observations
- Testing Requirements and Calibration of Constitutive Models
Overview

- Stress Invariants and Spaces
- Overview of Constitutive Models
- Elasticity
- Plastic Behavior of Soils
- Mohr-Coulomb Model
- Extended Drucker-Prager Models
Overview

- Modified Drucker-Prager/Cap Model
- Critical State (Clay) Plasticity Model
- Jointed Material Model
- Soil Plasticity Models - Summary
- Comments on the Numerical Implementation
Overview

- Basic Assumptions and Effective Stress
- Stress Equilibrium and Flow Continuity
- Types of Analyses and Usage
- Saturated Example Problems
- Partially Saturated Example Problems
Overview

- Element Technology
- Geostatic States of Stress
- Pore Fluid Surface Interactions
- Element Addition and Removal
- Material Wear/Ablation through Adaptive Meshing
- Hydraulic Fracture
- Reinforced Soil Slopes
- Other Applications
Stress Equilibrium and Fluid Continuity Equations

Overview

• General equations
• Fully saturated fluid flow
• Partially saturated fluid flow
Bibliography of Geotechnical Example Problems
